

# Storage as a Service

## Archive your data in the Cloud

**Safeguard your data with Dustin's STaaS, a fully managed cloud storage solution ideal for archiving extensive collections of infrequently accessed files. Our service is reliably hosted across multiple Dustin data centers, ensuring redundancy and security.**

Experience the ease of flexible data storage with Dustin's STaaS. Our cloud storage adapts to your business requirements, allowing you to scale capacity as needed without additional investments.

With Dustin's STaaS, you pay only for the storage you actively use. Your data is duplicated for safety, travels over secure networks, guaranteeing integrity and confidentiality.

### Data Protection

Your data is safeguarded against cyber threats with redundancy on every hardware level. The inherent immutable nature of object storage offers protection against ransomware. Object lock can be used to prevent any user from deleting data.

### S3 Protocol

S3 transfer goes over secure encrypted HTTPS protocol. A broad range of software supports the S3 protocol as either direct backup, replication, or tiering out older datasets.

### Management

Self-service portal for usage reports and creation of buckets, like multi-regional replication or ransomware-protected buckets

### Predictable Cost

Only pay for the storage you use. No hidden fees, no costly infrastructure investments.

### Data Sovereignty

Your data stays local. All our data centers reside in Europe and the platform is 100% owned by the Dustin company. Our platform is Schrems II-compliant due to the ownership structure which guarantees that all infrastructure and data is managed by a European company.

### Offload Your IT Now
