Platform Information
Form Factor 2U rack

Chassis Types
- 8 SFF with optional Universal Media Bay, and optional SFF or NVMe options
- 24 SFF bay with 6SFF rear drive bay options with 30 SFF drive bays total
- 8 LFF with Universal Media Bay
- 12 LFF plus optional 4 LFF mid-plane or 3LFF + 2 SFF drives rear with 19 LFF drive bays total

**NOTE:** The 3 LFF rear drives will consume space for the secondary riser.
**NOTE:** The 12 LFF chassis also supports 2 SFF rear which allows for the second riser.
**NOTE:** The 8 NVMe drive option (826689-B21) can only be leveraged in the SFF chassis and replaces Box 1, 2 or 3, however there is a maximum of 20 NVMe drives supported with Partial population of Box1.
**NOTE:** The Premium cage (826690-B21, 6 SAS/SATA+2 NVMe) can only be leveraged in the SFF chassis and replaces Box 1, 2 or 3.
**NOTE:** The Universal Media Bay (826708-B21) not available with the LFF chassis or the 24 SFF front end, and can only be populated in Box1.
**NOTE:** The 8 SFF can be upgraded with a drive cage to 16 or 24 SFF. For optimal upgrade Box2 should be populated second, with Box 3 the last to be populated for a field upgrade to 24 SFF. For CTO builds requiring 24 SFF plus use the 24 SFF chassis (868704-B21). Note a field upgrade to 24 SFF will require a High Performance fan kit (867810-B21).
**NOTE:** The 8 LFF chassis cannot be upgraded to 12 LFF front in the field; however the 4-LFF Mid plane (826686-B21) is supported, but will also require a performance fan kit (867810-B21).
**NOTE:** All models come with the S100i Smart Array Controller with embedded software RAIS support for 12 drives. The S100i uses 14 embedded SATA ports, but only 12 ports are accessible as 2 are leveraged to support the 2 M.2 options on the primary riser.

System Fans
Standard - fan types included
**NOTE:** 1P models typically ship with 4 standard fans. The second processor option kit contains 2 additional fans.
**NOTE:** The 12 LFF and 24 SFF chassis ship with 6 High performance fans as standard.
**NOTE:** High performance fan kit is available to meet ambient temperature environments.
**NOTE:** High performance fan kits are required for rear drives or NVMe configurations.

HPE 1600W Flex Slot Platinum Hot Plug Low Halogen Power Supply Kit

**NOTE:** Available in 94% efficiency.

HPE Flexible Slot (Flex Slot) Power Supplies share a common electrical and physical design that allows for hot plug, tool-less installation into HPE ProLiant Gen10 Performance Servers. Flex Slot power supplies are certified for high-efficiency operation and offer multiple power output options, allowing users to "right-size" a power supply for specific server configurations. This flexibility helps to reduce power waste, lower overall energy costs, and avoid "trapped" power capacity in the data center.

All pre-configured servers ship with a standard 6-foot IEC C-13/C-14 jumper cord (A0K02A). This jumper cord is also included with each standard AC power supply option kit. If a different power cord is required, please check the ProLiant Power Cables web page.

To review the power requirements for your selected system, please use the HPE Power Advisor Tool.

For information on power specifications and technical content visit HPE Server power supplies.

This section lists some of the steps required to configure a Factory Integrated Model. To ensure only valid configurations are ordered, Hewlett Packard Enterprise recommends the use of an HPE approved configurator. Contact your local sales representative for information on configurable product offerings and requirements.

1. Factory Integrated Models must start with a CTO Server.
2. FIO indicates that this option is only available as a factory installable option.
3. All Factory Integrated Models will be populated with sufficient hard drive blanks based on the number of initial hard drives ordered with the server.
4. Some options may not be integrated at the factory. Contact your local sales representative for additional information.

**NOTE:** HPE offers multiple Trade Agreement Act (TAA) compliant configurations to meet the needs of US Federal Government customers. These products are either manufactured or substantially transformed in a designated country. TAA compliance is only provided when HPE options are included as part of factory integrated orders (CTO).

**NOTE:** The HPE ProLiant DL380 Gen10 12 LFF CTO Server ships with the cable required for the P816i-a installation.
NOTE: This applies to CTO configurations, field upgrades may differ depending on field configuration.

NOTE: 3x 8 NVMe option on SFF will only allow for partial population of Box1 to max 20 NVMe.

Step 2a: Choose Required Options - Processors
(only one of the following unless otherwise noted)

Please select one -L21 processor required below.

For second processor, please select the same processor model with -B21 from Core Options - HPE Processors section.

For example: first processor, select 874752-L21 then for second processor, select 874752-B21.

NOTE: 1P models typically ship with 4 standard fans. The second processor option kit contains 2 additional fans. 12 LFF and 24 SFF CTO Servers ship with 6 High performance fans as standard. NOTE: 1x 1400W PS recommended, but this card will work with 1x800W PS (per GPU). However check the power usage via the HPE Power Advisor Tool located at [http://www.hpe.com/info/hppoweradvisor](http://www.hpe.com/info/hppoweradvisor).

NOTE: Performance fans (867810-B21) are required for all GPU installations (Note theseship as standard with the 24SFF and 12LFF models).

NOTE: Mixing of GPUs is not supported.

NOTE: With the Standard Primary Riser the top x8 PCIe Slot connector will not be accessible with the installation of a doublewide GPU.

NOTE: The P100, M10, P6000 and P40 cards are not supported with Processors over 160W.

NOTE: Only 2 SFF rear drives supported over Power Supply as would require Riser 1 and Riser 2 for GPU support.

NOTE: 4 LFF mid-tray will not support DW cards.

NOTE: 1 Invalid configuration or no HW support may apply to multiple GPUs installed. HW limitation may not be a thermal limitation.

Memory Population guidelines

HPE Gen10 DL360 / DL380 / DL560* Servers

2 Slots per Channel

Front of Server

* DL560 is a 4 socket server (uses P3, P4)

General Memory Population Rules and Guidelines:

1. Install DIMMs only if the corresponding processor is installed.
2. If only one processor is installed in a two-processor system, only half of the DIMM slots are available.
3. To maximize performance, it is recommended to balance the total memory capacity between all installed processors.
4. When two processors are installed, balance the DIMMs across the two processors.
5. White DIMM slots denote the first slot to be populated in a channel.
6. Mixing of DIMM types (UDIMM, RDIMM, and LRDIMM) is not supported.
7. The maximum memory speed is a function of the memory type, memory configuration, and processor model.
8. The maximum memory capacity is a function of the number of DIMM slots on the platform, the largest DIMM capacity qualified on the platform, the number and model of installed processors qualified on the platform.

To realize the performance memory capabilities listed in this document, HPE DDR4 SmartMemory is required. For additional information, please see the HPE DDR4 SmartMemory QuickSpecs.

## System Inlet Temperature

### Standard Operating Temperature
- 10° to 35°C (50° to 95°F) at sea level with an altitude derating of 1.0°C per every 305 m (1.8°F per every 1000 ft) above sea level to a maximum of 3050 m (10,000 ft), no direct sustained sunlight. Maximum rate of change is 20°C/hr (36°F/hr). The upper limit and rate of change may be limited by the type and number of options installed.
- System performance during standard operating support may be reduced if operating with a fan fault or above 30°C (86°F).

### Extended Ambient Operating Temperature
- For approved hardware configurations, the supported system inlet range is extended to be: 5° to 10°C (41° to 50°F) and 35° to 40°C (95° to 104°F) at sea level with an altitude derating of 1.0°C per every 175 m (1.8°F per every 574 ft) above 900 m (2953 ft) to a maximum of 3050 m (10,000 ft). The approved hardware configurations for this
system are listed at the URL:
http://www.hpe.com/servers/ashrae

For approved hardware configurations, the supported
system inlet range is extended to be: 40° to 45°C (104° to
113°F) at sea level with an altitude derating of 1.0°C per
every 125 m (1.8°F per every 410 ft) above 900 m (2953 ft)
to a maximum of 3050 m (10,000 ft). The approved
hardware configurations for this system are listed at the
URL:

System performance may be reduced if operating in the
extended ambient operating range or with a fan fault.

Non-operating -30° to 60°C (-22° to 140°F). Maximum rate of change is
20°C/hr (36°F/hr).

Relative Humidity
Operating 8% to 90% - Relative humidity (Rh), 28°C maximum wet
bulb temperature, non-condensing.

(non-condensing) Non-operating 5 to 95% relative humidity (Rh), 38.7°C (101.7°F)
maximum wet bulb temperature, non-condensing.

Altitude
Operating 3050 m (10,000 ft). This value may be limited by the type
and number of options installed. Maximum allowable
altitude change rate is 457 m/min (1500 ft/min).

Non-operating 9144 m (30,000 ft). Maximum allowable altitude change
rate is 457 m/min (1500 ft/min).

Acoustic Noise
Listed are the declared A-Weighted sound power levels ($L_{Wa}$) and declared
average bystander position A-Weighted sound pressure levels ($L_{pa}$) when the
product is operating in a 23°C ambient environment. Noise emissions were
measured in accordance with ISO 7779 (ECMA 74) and declared in accordance
with ISO 9296 (ECMA 109). The listed sound levels apply to standard shipping
configurations. Additional options may result in increased sound levels. Please
have your HPE representative provide information from the HPE EMESC website
for further technical details regarding the configurations listed below.
