

RollerMouse
Red Wireless
coming
soon!

Your new way of working.

Would you like to work efficiently without getting tired? If you spend much of your time in front of a computer, a good workplace is essential. With a smart mouse whose design is based on your body's movements, you can prevent repetitive strain injuries.

Comfort and productivity

Maybe you work with multiple screens or with CAD and require individual adaptation? Then RollerMouse Red is just what you need. The wider your workspace, the more the pointer outreach is automatically extended. You can make adjustments to suit your needs and will quickly learn to work more ergonomically with the intuitive and intelligent features. The stable, rubberized rollerbar with a textured surface allows you to easily move the cursor. With greater precision and more control, you can work more efficiently without getting tired.

Unrivalled feel and precision

Now you no longer have to strain yourself – with just a slight movement of either hand to the roller bar, you can use all the features that are usually found in a computer mouse. RollerMouse Red plus has a deep and low wrist support, providing a better angle for your wrists. If you are short of space or prefer a smaller wrist support, you opt for RollerMouse Red.

Proven effect

You can reduce muscle strain in your arms by up to 20 % since your hands and arms are in a neutral position. We know that this is a good solution, because we cooperate with the leading ergonomists and experts within the field of occupational health. And it is also a design classic, made in stylish aluminium with red details.
